

“The challenge is to simplify...”

ABOUT US

When it comes to information technology, you have experts available dime-a-dozen. A plethora of technology only complicates the effort of designing the right solution. What really matters is a thorough understanding of the required business needs, and then creating a smart solution that takes care of present and future needs, while keeping the time and the costs to the minimum.

The challenge really is to make information technology simple and workable for you.

At **Jigme Consultancy Services**, we understand this all too well. As fast growing IT SOLUTIONS PROVIDER, we focus on one thing: **ROI**. For us at **JCS**, **Return On Investment** is not just a jargon, nor is it a long-term term expectation, as we strongly believe in early returns on IT investments.

We at **JCS** help organizations maximize the value of IT investments and gain competitive edge in their business. Understanding your business requirements, offering you with IT solutions & products are our prime concerns.

THE ROI PROMISE

Every information technology has an implicit promise of ROI. However, depending upon the applications, its implementation and usage, it produces various results. In fact, at times it is likely to produce minimal or no results. One of the prime reasons for this is the lack of understanding on the part of technology vendor. Often, they take refuse in technicalities of ROI calculations.

We believe that IT must essentially be deployed to deliver better efficiencies, save costs and provide the user with competitive edge through better information Management strategies. All of our work is geared to map, measure and deliver the best return on investment in IT.

OUR CAPABILITIES/SKILLS

At **JCS**, we are obsessed with the 'big picture.' And it is this obsession that drives us to look at our clients in a holistic manner. Thus, we are able to offer solutions that integrate seamlessly into the current IT architecture keeping costs and change management issues to the minimum. Given our expertise in small and medium sector industries, we are able to provide solutions that span end-to-end.

On the technical front, our specialists are adept at:

Application Platforms	Operating Systems	Databases	Technologies
.Net	Windows & UNIX	Oracle	VB, ASP, C#
Java2EE	Windows CE	Db2	Java, JSP, XML
IBM WebSphere Suite	Palm OS	Sybase	Web services
BEA WebLogic	Java2 Micro Edition	MySQL, mSQL, SQL	PHP, CGI/Perl

OUR SERVICES

Our core strengths range from **IT Consulting, Research and Solutions**. In each of these areas, we offer several related services and value-added solutions.

IT Consulting

Implementing enterprise solutions requires a great deal of understanding of domain, work processes, inter- and intra-enterprise relationship management. For any enterprise-wide solution is likely to affect all of these areas at various touch points.

At **Jigme Consultancy Services**, we attach most importance to understanding our client's unique needs before designing solutions. Right from organizational and process mapping, we work closely with our clients for assessing the needs. A comprehensive business process reengineering exercise to eliminate redundancies or wasteful practices and streamline the processes then follows this.

Once this is done, we work out the functionality requirements, required technology platform, legacy database porting strategies, and design the solution. Our internal domain specialists along with technology associates develop the solution, extensively test it, and implement it at the clients' location(s).

The IT competence in SME sector is relatively low as compared to large companies due to the lack of full-fledged IT departments. The computerization too, is usually in islands with basically functions such as accounts, payroll and inventory automated. Often, these are standalone applications and almost impossible to integrate into a common architecture.

Faced with these challenges and the budgetary constraints, SMEs need IT consulting support to ensure best value for money. We at **JCS** have specially geared our services to assist SMEs in leveraging IT for gaining competitiveness while driving out inefficiencies.

Research

In many ways, the research activity is an extension of our consulting work at **JCS**. We are involved in evaluating new technologies and third-party solutions on a continuous basis. We undertake technology evaluation studies on our client's behalf. Depending upon the need, we look for appropriate third-party solutions and do an extensive testing of functionality, technical competence, system architecture and scalability under simulated conditions. This is followed by recommendation reports.

Our research also focuses on various other IT-related issues including hardware, network design & implementation, Internet-enabled operations, technology and managerial challenges, training issues. In other words, our research team prepares the ground for our consulting assignments injecting the cutting-edge know-how into our work culture.

Solutions

While we are primarily a consulting and Research Company, our domain knowledge is substantial in industries such as Telecom, Construction, Finance, Manufacturing, Hospitality, Health and Travel.

We take care of the business process mapping, needs assessment, implementation, training and commissioning. Since we design these solutions, the customization process too is managed with great ease. We offer these solutions as licensed products or on pay-per-use basis.

Some of the most versatile products for various Industries we currently offer are:

● SynerG - Enterprise Business Solutions Suite

JCS-ERP SynerG is an enterprise-level solution developed by our highly dedicated and experienced team, which strives to provide an answer to the multifarious problems faced by businesses today. This is especially important in helping small and medium sized businesses achieve levels of system integration hitherto associated only with huge enterprises and expenses.

● HR.G

One source that takes total care of your employees while making your company more efficient and productive. **HR.G** give your employees, HR staff, and managers much greater direct access to information and control over their own benefits, with the flexibility to work the way you want to work. And a team that takes care of your people the way you'd take care of them yourself.

● BuildWay

A comprehensive solution for construction businesses for customer management. It includes functionality to manage multiple projects, sales and billing of flats/shops right up to handing over the property possession.

● Shipmate

Now, there is one company that delivers a total Order Processing and Stock Inventory Solution. With the flexibility to work the way you want to work. Shipmate specifically designed and developed for maintaining Stock and Inventory along with Order Processing System, enforcing a strict workflow involved in any shipping industry.

● Edupro

Edupro is one stop solution for the complete admission process for any institute. Edupro is written for an Intranet System and uses all open source technology. Edupro can support multiple users at multiple locations in your organization simultaneously entering, retrieving and editing data. Edupro currently uses mySql as the core database and is written using PHP 4 while it uses Apache for the Web server.

● DataRight

One of the greatest challenges facing enterprises today is the avalanche of data that must be recorded, stored and made available to decision makers. DataRight enable Data Management and Decision Support helping customers to manage their data efficiently and effectively, allowing them to use that information to make faster and better-informed decisions.
